Capax - wall panels

Capax is the name for our unique installation system with aluminium profiles for mounting wall and ceiling panels.

The system currently has several different solutions that meet both aesthetic and functional requirements. The variants of joints and connections are several.

Gustafs Panel System is fitted on to walls by means of Capax installation profiles so that each panel is individually locked on all four sides.

All Gustafs Capax profiles are manufactured in aluminium. The high precision and high torsional stiffness of the aluminium profiles results in a rigid and self-supporting system, which allows completely hidden and seamless installations.

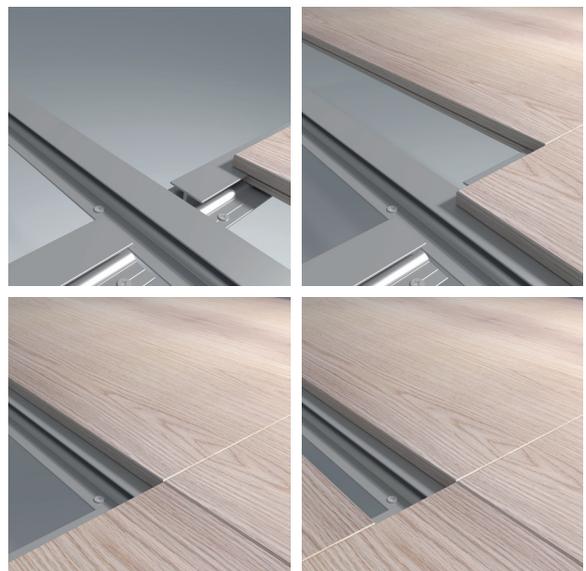

AN INTEGRATED INSTALLATION SYSTEM

The Capax installation system is fully integral with the panels, concealed, time saving and reliable. The construction is torsionally rigid and self-bearing, lacking the need to fix onto adjacent walls.

Gustafs Capax System offers full panel demountability and thereby access to overlying technical installations while maintaining its overall stability and strength.

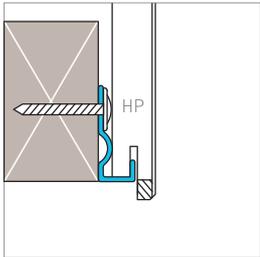

Our website is always up to date, all current information about Gustafs products can be found here » [gustafs.com](https://www.gustafs.com)
